

## Guillain-Barré syndrome and chronic inflammatory demyelinating polyradiculoneuropathy after alemtuzumab therapy in kidney transplant recipients

*Neurol Neuroimmunol Neuroinflamm* 2020;7:e882. doi:10.1212/NXI.0000000000000882

In the Clinical/Scientific Note, “Guillain-Barré syndrome and chronic inflammatory demyelinating polyradiculoneuropathy after alemtuzumab therapy in kidney transplant recipients,” by M. van der Zwan et al.,<sup>1</sup> the final sentence under the “Study Design” subheading of the Methods section should read “Alemtuzumab was administered as a single dose of 30 mg subcutaneously and rATG in a dose of 4 mg/kg.” The publisher and authors regret the error.
